Education

HackerU: Red Team Specialist

Course: 2022.04 - 2022.12 | 565h

- Linux & Windows -
- OS Exploitation -
- Privilege Escalation -
- Active Directory -
- Web & Mobile app Penetration testing -
- SIEM/SOC -
- Malware Analysis -

Certificates

TDX Arena **Penetration Tester**

TryHackMe **Advent of Cyber**

Jr Penetration Tester

Web Fundamentals

CompTIA Pentest+

Pre Security

Introduction to CyberSecurity

Sekurak **Web App Hacking**

OSINT/OPSEC: Disinformation analysis

HackerRank **Basic Python**

FreeCodeCamp **Scientific Computing**

Atomic IT

Python Team Lead

2025/6 - Present

- Engineered pipeline for creating Python microservices for ERP system
- Facilitated meetings with Clients & Planned tailored solutions
- Improved project management & Consulted on solution deployment strategies
- Set up a team of AI Agents to improve usage of LLMs for code generation
- Spearheaded migration to Supabase backend

Event Organization

Developer (Seasonal)

2025/5 - Present

- Organized local live events with ARG mechanics, puzzles, story & in-house tech solutions around audio experience & management
- Developed an automated audio transcription tool leveraging Whisper
- Developed full-stack website for event registration & attendees management
- Engineered an AI-driven song-processing pipeline for karaoke software, handling ingestion, preprocessing, and feature extraction for downstream services
- Organized & executed live event for over 40 people from the start to finish

xBerry

Backend Developer (Contract)

2024/2 - 2024/4

- Designed queues flow & Migrated REST API to RabbitMQ-based communication between inner applications
- Automated deployment of multi repo app with docker-compose by utilizing Git repos as sources
- Tested entire stack End to End (E2E) & Wrote unit tests with pytest
- Migrated code to asyncio & Integrated SQL database

Bot Development

Python Developer

2019/4 - 2024/7

- Built extendable system for automation, moderation & engagement development for chat application
- Created microframework for command creation
- Automated REST API client generation
- Streamlined CI/CD with GitHub Actions & Webhooks
- Split monolithic application into smaller applications, libraries & Designed microservice architecture plan
- Containerized application with Docker & Reduced image size by 45%
- Provided live-service, support & managed hosting for multiple clients serving 100s of active users
- Designed & Implemented SQL database schema for Inventory Management System with RESTful API for both dev UX & data storage by utilizing Supabase

Techland

Discord Administrator, Event Manager

2020/1 - 2023/11

- Improved detection of bots, spam prevention & automoderation
- Improved Quality of Life for moderators by:
 - Streamlining moderation actions & infraction logging
 - Improving communication with team by introducing Modmail system
- Hosted over 15 events with 8 unique handcrafted minigames
- Developed Modmail Bot & Gathered community feedback

Freelance

Developer, Community Manager

2018/9 - Present

- Mentored 4 people learning Python
- Set-up, Configured & helped manage multiple Discord servers from small (~100) to big (~100k)
- Programmed ETL pipeline for visualizing travel datasets
- Collaborated with cross-functional teams to identify areas for automation and implemented tailored solutions to meet business needs
